

XtremeTrakGPS XT-300 Portable Live GPS Tracking Device

QUICK START GUIDE

Thank You for Purchasing the XtremeTrakGPS XT-300

Device and Service Activation

Congratulations on purchasing the XT-300 Portable Live GPS Tracking Device.

The first thing you need to do to use this device is to set up your account information and monthly service. To do this, please contact our activation line at 405-749-1105 between the hours of 7am and 7pm Central Time Monday through Friday, or 9am to 4pm on Saturday.

Once you've got your monthly service set up, along with your login information for the tracking portal, please proceed to the setup and installation step.

Accessing Your Tracking Account

After you've activated the device, set up your username and password, and charged, and properly installed your XT-300, visit the live tracking portal and log in with your credentials at:

<http://live.xtremetrakgps.com>

You can access the tracking portal from any internet-connected computer, PC or Macintosh. You can also access the site from your favorite smartphone or tablet, including the iPhone and Android devices.

The site is web-based, so there is no additional app download necessary. Just type the address into your browser, and bookmark it for quicker access.

Device Notes and Information

If the device is moving less than 10mph, it will transmit every 20 feet. If it is moving faster than 10mph, it will transmit every 10 seconds.

To see how much battery power is remaining, simply place your cursor over the vehicle's marker on the control portal. The value will range from 1 to 100, indicating the percentage of power remaining.

Up to 3000 devices can be viewed through our web-based mapping system under a single login.

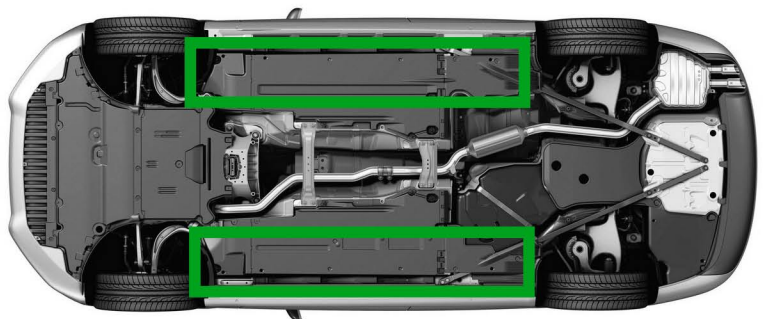

XT-300 Device Placement

If the device is going to be used to track a person - such as security personnel, the elderly, or anyone who will be carrying the device on their body, there are several places to carry the device. The XT-300 can be easily placed in a shirt, pants, or coat pocket, a purse, briefcase, or a backpack.

For vehicle tracking, we strongly recommend utilizing the optional magnetic mount car case that is available. The magnetic mount car case has an 80-pound pull magnet, meaning it takes approximately 80 pounds of force to remove it, which means it will stay firmly attached to your vehicle while your vehicle is in motion.

The magnetic mount case must be **secured properly to the metal frame underneath your vehicle** - NOT under the bumper, in a wheel well, or placed anywhere else.

The ideal placement to attach the magnetic mount case along one of the metal frames running along side the drivers or passenger door side (see green area on diagram below).

If your device is performing as it should, there are three possible common problems:

- 1. Poor Satellite Visibility** - The GPS cannot see through metal. If this is the cause, changing the location of the device to give it a better view of the sky should solve the problem.
- 2. No Wireless Data Service** - It's possible you could be in an area with poor or limited GSM wireless data coverage. Consult GSM coverage maps to confirm, or move the device to a more populated area to see if the problem persists.
- 3. Device Has No Power** - Check to confirm the lights blink periodically on the top of the device. Recharge the battery to continue operation.
